New Outcomes in Cataract Surgery

\$59.00

Editors: Samuel Boyd, M.D., Jack Dodick, M.D., Lincoln L. Freitas, M.D.

Topics:

- *Bimanual Sleeveless Microphacoemulsification Using the "Tilt and Tumble" Technique*
- *Optimizing the Refractive Outcome: Correction of Astigmatism in Cataract Surgery*
- *IOL Power Calculation in Standard and Complex Cases*
- *Phacoemulsification by an Expert*
- *Strategies for Handling the Hard Nucleus*
- *Safe Chop: A Phaco-Chop Safer Technique*
- *AquaLase versus Phaco*
- *Transition from Standard Phacoemulsification to Bi-Manual Phaco*

Description:

This publication compiles the advances in Phacoemulsification, Microincision in Cataract Surgery and the modern modifications and evolution of intraocular lenses, the stage has been set for a detailed understanding of these popular techniques, the disease processes affecting visual acuity and the potential for visual rehabilitation after surgery.

"New Outcomes in Cataract Surgery" brings together in one book, the advances in laser technique, advances in phacoemulsification by experts, the most complete details in the transition from standard phacoemulsification to bi-manual phaco and also the required diagnostic studies such as IOL power calculation in complex cases to provide you with new insights for a perfect cataract procedure. This book represents a unique research reference and will serve as the definitive and ultimate resource for clinicians,

researchers, surgeons and teachers.
