Description:

The second Volume of "THE HIGHLIGHTS COLLECTION" on Age-Related Macular Degeneration (AMD), compiles the whole concept of macular degeneration from its initial evaluation to the most revolutionary treatments performed today.

Nowadays, AMD is considered the most common cause of blindness in developed nations. Approximately 10-15% of patients over the age of 65 have signs of AMD and by the age of 70 the number increases to 31%. It is important to understand that as our society ages, the prevalence of AMD would increase causing a tremendous impact on their quality of life.

Each one of the Contributing Authors in this Volume attest to a significant progress and achievements in this field, as we continue to improve our diagnosis and management of this devastating disease.

We have been fortunate by the participation of these prestigious authorities who have provided us with most valuable information, perspectives and insights. May "**THE HIGHLIGHTS COLLECTION**" on Age-Related Macular Degeneration contribute to your further understanding of what is best for your patients, and to master the "state of the art" techniques on this field.
